Art Unit: 2617

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1-12, 15-45 are rejected under 35 U.S.C. 102(e) as being anticipated by Gomez (6178327).

Regarding claim 1 Gomez teaches for use in communication system where connections are established between an external network and users of mobile radio subscriber units by way of a radio access network and each established connection is handled by an associated data processing circuit, a method comprising:

detecting a failure in a data processing circuit indicating that the data processing circuit is not functioning and thus can no longer handle established connections (Note: since, the Base Station is broadcasting a fault detection message (sending a message to the mobile station) indicating the existence of the fault condition and failure detected circuits includes fault in a telephone interconnect Circuit, fault in a dispatch circuit, packet data circuit and circuit data circuit between the base station and the communications servers, it is clear that the system is detecting a failure in a data processing circuit indicating that the data processing circuit is not functioning. As a

result, the faulty circuit can no longer handle established connections.)(col. 4, lines 41-65 and col. 5, lines 10-25);

identifying one or more established mobile radio subscriber unit connections being handled by the failed data processing circuit and sending a message identifying the one or more identified mobile radio subscriber unit connections (Note; since, base station sends which communication services being affected by fault condition and mobile stations are receiving alert about the detected faulty condition of communications links [i.e., mobile radio subscriber unit connections].)(col. 4, lines 1-20, 41-67):

wherein each mobile radio user connection is active and ongoing, is associated with one or more radio access bearers, and carries information between the mobile radio subscriber unit user and another communicating entity coupled to the external network (col. 5, lines 15-24).

Regarding claim 15 Gomez teaches for use in communication system where connections are established between an external network and users of radio subscriber units by way of a radio access network and each established connection is controlled by an associated data processing device, a method comprising:

detecting a failure in a data processor device in a node where the failed data processing device is no longer functional and thus can no longer control any established connections (col. 4, lines 41-50, see claim 1), and

sending a message identifying the failed data processing device to one or more other nodes, wherein the one or more other nodes release radio subscriber unit connections associated with the identified failed data processing device (col. 4, lines 41-67),

wherein each mobile radio user connection is active and ongoing, is associated with one or more radio access bearers, and carries information between the mobile radio subscriber unit user and another communicating entity coupled to the external network (col. 5, lines 15-24).

Regarding claim 21 Gomez teaches for use in radio communications system providing communications between an external network and radio units, a radio access network that establishes connections between the external network and users of the radio units, comprising:

a radio network control node for communicating with the external network; and a radio base station node coupled to the radio network controller configured to provide a radio interface with plural radio units, wherein at least one of the nodes includes multiple data processing devices, where each established connection is controlled by an associated data processing device, and when a failure is detected in one of the data processing devices such that the failed data processing device is no longer functional and thus can no longer control any established connections, the one node is configured to send a message to another of the nodes identifying one or more active and ongoing radio unit connections affected by the failure (col. 4, lines 41-67, see claim 1),

wherein each connection is active and ongoing, is associated with one or more radio access bearers, and carries information between the radio unit user and another communicating entity coupled to the external network (col. 5, lines 15-24).

Page 5

Regarding claim 34 Gomez teaches for use in providing communication connections between an external network and a user of a mobile subscriber unit, a network node communicating with one or more network nodes, comprising:

multiple data processing devices for controlling established connections, a controller configured to perform the following tasks: detect a failure in the one of the data processing devices such that the failed data processing device is no longer functional and thus can no longer control any established connections; determine one or more active and ongoing mobile subscriber unit connections affected by the detected failure; and send a message to one or more other network nodes identifying the one or more affected mobile subscriber unit connections (col. 4, lines 41-67, see claim 1), wherein each mobile subscriber unit connection is active and ongoing, is associated with one or more radio access bearers, and carries information between the mobile subscriber unit user and another communication entity coupled to the external network (col. 5, lines 15-24).

Regarding claim 43 Gomez teaches for use in a communication system where connections are established between an external network and users of radio subscriber units by way of a radio access network and each established connection is handled by one of multiple data processing circuits in a radio access node, apparatus comprising:

means for determining one or more active and ongoing radio subscriber unit connections affected by a failure detected in one of the data processing circuits indicating that the data processing circuit is not functioning and thus can no longer handle established connections, and means for sending a message identifying the one or more affected established radio subscriber unit connections that can no longer be handled by the failed data processing device (col. 4, lines 41-67, see claim 1),

Page 6

wherein each established radio subscriber unit connection is active and ongoing, is associated with one or more radio access bearers, and carries information between the radio subscriber unit user and another communicating entity coupled to the external network (col. 5, lines 15-24).

Regarding claims 2,22,35,44 Gomez teaches releasing the one or more affected mobile radio subscriber unit connections identified in the message (col. 4, lines 41-67).

Regarding claims 3,23,36,45 Gomez teaches maintaining one or more mobile radio subscriber connections not determined to be affected by the detected failure (col. 4, lines 51-67, see claim 1).

Regarding claims 4, 24, 36 Gomez teaches maintaining a signaling connection associated with a mobile radio subscriber unit affected by the detected failure (col. 4, lines 41-67).

Regarding claims 5,16,25,37 Gomez teaches wherein the mobile radio subscriber unit uses plural connections during a communications session (col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Art Unit: 2617

Regarding claims 6, 19, 26 Gomez teaches generating a list identifying the one or more mobile radio subscriber units affected by the detected failure and one or more subscriber unit connections affected by the detected failure, and wherein the message includes the list (col. 3, line 60-col. 4, line 10, col. 4, lines 41-67, see claim 1).

Regarding claims 7,20,27,38 Gomez teaches generating a list identifying the one or more mobile radio subscriber units affected by the detected failure without identifying radio subscriber unit connections, and releasing all mobile radio subscriber unit connections associated with the one or more subscriber units in the list (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67, see claim 1).

Regarding claims 8,18,28,39 Gomez teaches indicating in the list whether a signaling connection associated with a mobile radio subscriber unit affected by the detected failure should be released or maintained (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Regarding claims 9,17,29,40 Gomez teaches wherein the list includes identifiers for the one or more mobile radio subscriber units affected by the detected failure and for the one or more subscriber unit connections affected by the detected failure (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Regarding claims 10,30,41 Gomez teaches wherein when the list does not include connection identifiers, all connections for a mobile radio subscriber unit are released (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Art Unit: 2617

Regarding claims 11,31,42 Gomez teaches wherein the message is sent to one or more other nodes (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Regarding claims 12, 32 Gomez teaches wherein the node is one of an external network node, a core network node, an access network node, and a mobile radio subscriber unit (fig. 1).

Regarding claim 33 Gomez teaches wherein the message is a control signaling message (col. 2, lines 38-64, col. 3, line 60-col. 4, line 10, col. 4, lines 41-67).

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 13-14 and 51-52 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gomez (6178327) further in view of Ramaswamy (6643512).

Regarding claims 13-14 and 51-52 Gomez teaches the MSC may connect the mobile station to another mobile station, or to a public switched telephone network (PSTN) 124. Likewise, a MDG provides packet data connectivity to a wide area packet network (WAPN) 126, such as the internet. A DAP provides high speed, intra-system, half-duplex, one to one, or one to many voice connectivity. Gomez does not specifically teach a radio network controller and the core network node is an SGSN.

Art Unit: 2617

In an analogous art, Ramaswamy teaches a radio network controller and the core network node is an SGSN (col. 1, lines 20-30, fig. 1-2). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device of Gomez by specifically adding feature a radio network controller and the core network node is an SGSN in order to enhance system performance to Communication failure between mobile station (MS) (12) and radio network controllers (RNC) (10a, 10b) which control radio coverage in radio access network areas (1a, 1b) is detected. A request is transmitted from RNC to core network (20) and preventing malicious user causing dropped connection as taught by Ramaswamy.

Response to Arguments

5. Applicant's arguments filed in the 08-05-08 Remarks have been fully considered but they are not persuasive. Examiner has thoroughly reviewed applicant's arguments but firmly believes the cited reference to reasonably and properly meets the claimed limitations. Applicant's argument was that "detecting a failure in a data processing circuit indicating that the data processing circuit is not functioning and thus can no longer handle established connections; identifying one or more established mobile radio subscriber unit connections being handled by the failed data processing circuit and sending a message identifying the one or more identified mobile radio subscriber unit connections". Examiner respectfully disagrees with this argument. Gomez teaches that since, the Base Station is broadcasting a fault detection message (sending a message to the mobile station) indicating the existence of the fault condition and failure detected circuits includes fault in a telephone interconnect Circuit, fault in a dispatch circuit,

Art Unit: 2617

packet data circuit and circuit data circuit between the base station and the communications servers, it is clear that the system is detecting a failure in a data processing circuit indicating that the data processing circuit is not functioning. As a result, the faulty circuit can no longer handle established connections. (col. 4, lines 41-65 and col. 5, lines 10-25). Note; since base station sends which communication services being affected by fault condition and mobile stations are receiving alert about the detected faulty condition of communications links [i.e., mobile radio subscriber unit connections], it is clear that the system is identifying one or more established mobile radio subscriber unit connections being handled by the failed data processing circuit.)(col. 4, lines 1-20, 41-67). (Note; Examiner interpreted data circuit of base station 106 in Fig.2 as the claimed data processing circuit.).

- 6. Claim 3, 6 and 7 same answer see above.
- 7. Note: Applicant did not response claims 1, 15, 21 and 43 are rejected under 35 U.S.C. 112, second paragraph last action dated mail by 05-09-08.
- 8. Applicant's arguments with respect to claims 13-14 and 51-52 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

9. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not

Art Unit: 2617

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to KHAWAR IQBAL whose telephone number is (571)272-7909. The examiner can normally be reached on 9 am to 6.30 pm Monday to Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, GEORGE ENG can be reached on 571-272-7495. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
